

Nature Park Hirschwald is located between the cities of Amberg, Nürnberg and Regensburg. It´s an area with a big population and easy to reach directly from the highway A6 crossing the area, however I found no remarked activation from DLFF-067 before, by studying the cluster-spots. So while touring this area I´ve decided to make a short activity.

Our first location was absolutely terrible and also propagation very bad this time, so we decided to move some kilometer and unpack directly in the middle of the park area near the small town Hirschwald.

Equipment was a YAESU FT-450AT with a dipole-antenna battery-powered.

Finally in two hours activity brought 143 stations in the log. All QSOs where made in SSB, so no key with me, sorry.

Log was uploaded to the WFF-database at 24.july 2010,

my xyl watching for the expected rain

Map of the „Hirschwald“-area

location directly behind „Hirschwald“, a small „town“ with only a few houses

*DF6EX/p at operating-position*

thanks to Igor EW4DX for his work and continuously support for the community.

All QSOs were also confirmed with a QSL-card via the buro.

Thanks for all stations who calling me and hope to meet you from another spot.

Plans include further activations from parks together with the DA0CW-team and also further activity as OK8WFF is in the planning-phase.

So 44, till the next time.  
Manfred -DF6EX-
