Palace of Brand

Palace of Brand appeared the first time in the year 1221 in some certificates. In that time the Brander were dependent from the sovereign of Liebenstein, after their history ended this relationship changed to the Notthaft family which had several castles and palace in that area. In the middle age the palace of Brand hosted some ministers. In the 17th century the well-known componist Jobst von Brandt wrote here the late work of his lifetime. In the end of the 17th century nearly the whole castle burned down but was renewed couple of years later. The 19th century had some quick changes of the ownership with finally the end from the dependence from the Notthaft family. In the latest history the castle was between 1969 till 2007 in the ownership of a brewery. Since that time it belongs to an association which attempts to refurbish the building in proper manner.

Palace of Brand DL-03147 FBN-319

This activity was again a quick one out of the box. Decided with my xyl in the morning that we will go for another castle-trip however weather was looking strange when we started. Brand is located about 10km away from the city of Marktredwitz and beside the castle it's also located in the nature-park Fichtelgebirge DLFF-058. We were a bit late in time when arriving there and searching for an acceptable location for the operation. So after setup the begin was at 0918 UTC and the usual run on 40meter was no longer possible as the band was not so good. Also some static noises from rains and thunderstors in the area. So the first attempts were on 20 meters but also not so good propagations. So during the stay there were some switches back to 40 , back to 20 and so on. Finally there was also a nice but only short shortskip-opening to northern germany, netherlands, belgium on 20 meters with signals of S9 and above. We used again the special call from OV-Stiftland DP7COTA with the special-DOK COTA. After a bit less than two hours the rain started and we decided to close down the station with 145 contacts in the log. All contacts were uploaded to WCA and WFF-database. 73, 44, 11, Manfred DF6EX
