Moorgebiet bei Bärnau DLFF-0580

DLFF-0580 view into the moor

Just one day after the latest activity we moved out to the other direction near the czech border.

In 2011 we made just about 3 km away our most successful operation as OK8WFF from OKFF-0012 with more than 1000 contacts.

At this time saw the first time also the shield showing the other direction pointing to Pavlova Hut. When reading more about this name found out that this is a dead villa-ge which was used before WWII from glass-industry. Meanwhile there are only some rests of huts and this makes OKFF-0800.

Operation to DLFF-0580 was not more or less a preparation-activity which will lead us 2019 to OKFF-0800. From the green border near DLFF-0580 you need to go around 2 km through the wilderness to reach the protected czech-area. So we plan for spring and this will be also then a reactivation from DLFF-0580 on the german side.

At 13.october we had again luck with the weather. Nice sunny and not too warm. Our station setup was finished at 0720 UTC. At 0723 we started with ON2OY as first station on 40 meters.

Moorgebiet bei Bärnau DLFF-0580

location in the meadows

In the first hour 160 contacts could be done.

That day also 20 meter was a bit better and we could also hand out the new multiplier there to several stations.

When the interest was going done we moved to CW and had also there a nice run first on 20 and later on 40 meters.

Total result this time 278 contacts with 33 countries including 11 p2p-contacts.

green-border to czech-republic

73, 44, 11,
see you next time
