inside-view with the „watchdog“

After the good result from the previous day I started at august 22 again for a quick activity. Weather was much warmer then the day before and finally also propagations were much bader.

After the good short-distance condition had the hope that it will continue but the next day short totally different view. Started almost on the minute same time like day before however everything surrounding from germany, austria, czech republic were mostly deep into the noise.

Some short openings produced a series of contacts and then again everything was over for minutes.

20meters was again not usable. Finally could work around 35 stations on 30meters including japan. If nothing helps, CW is a good solution. So this time also the mix between SSB and CW was nearly 50/50 percent.

Top three countries were germany with 30, italy 27, then poland with 15. So there were much more countries this time wich produced almost 10 contacts like spain, russia, england, ukraine, france, belgium. The often country-leaders like italy and poland this day had bader propagations.

Finally ended after a bit more than two hours operating time with 182 contacts in the log.
Thank you for calling, listening and spotting.

73, 44, 11,
see you next time
